Dear Valued Sponsor,

The Hillsboro City Schools Robotics Team is respectfully asking for your financial support for the 2017-2018 season. The robotics program provides students of Hillsboro City Schools, in middle and high school, the opportunity to design, develop, and evaluate competitive robots around Ohio and the world. Last year our teams competed in many Ohio competitions and one team earned a spot on the Ohio State Tournament Champion alliance. This group had the opportunity to compete in Louisville at VEX Worlds, where the best robotic teams from around the world compete! Finally, among Ohio Middle Schools, Hillsboro Robotics was third in the state in overall team recognition and success! Our local sponsors and the support of Hillsboro City Schools made this possible.

This year, your financial partnership will provide the team the ability to purchase new and replacement materials for the season and to once again compete across the state. Hillsboro City Schools will also be hosting a robotics event on November 18, 2017. Your financial support will also assist in welcoming students from across Ohio, and perhaps other states, to compete in the first VEX Robotics Tournament in, and around, Highland County. Please consider assisting our program financially as we continue our strive for excellence this year, as we continue to educate, and promote, our young engineers. These fabulous young adults have the outstanding capacity to be amazing leaders in our future community.

We will be advertising your business on shirts that will be worn by our team members and coaches. We'll also sell the shirts to staff, parents, and anyone who wants to contribute to our program. These shirts will be seen by thousands of individuals based upon the many competitions that we attend. We will also be getting a banner with your company logo to proudly present your financial commitment to our program which will be placed in our school, and travel to our competitions across Ohio. There are no contributions that are too large or too small, and your support will greatly affect not only the success of this year, but the future careers of our team members. I personally want to thank you in advance for your consideration, as well as your support to help the Hillsboro Robotics teams continue their successful journey.

Respectfully yours in education,

Timothy J. Crowder
